

### Desktop Tablet Laptop Use

The TAS Risk Management system is internet driven and may be used on any desktop, laptop or tablet with any type of browser as long as you are connected to the internet.

We also offer, at no additional cost, a special module that let's you use the system without internet connectivity and then upload results to the server the next time you connect. Once you upload all data from the laptop or tablet is automatically deleted to prevent HIPAA violations.

**All TAS systems utilize best industry practices to assure security.**
