

## Incidents

Capture all types of incidents whether patients, staff, vendors or visitors. You can populate the types with the ones pertinent to your business. The intuitive interface automatically opens only the fields that you really need to fill. Follow-up and all additional reviews are automatic and send both application and email notices to the responsible parties. Everything is “need to know” so you don’t have to worry about someone getting ahold of the wrong information.

The system works the same for all types of incidents including:

- Patient Rights
- Injuries/Slips/Trips and Falls
- Medical Errors
- Vehicle Accidents
- Abuse
- Malpractice
- Anything else you wish to track...

You have complete control over what is tracked, who is notified, follow-up, severity of risk and everything else.
